

ECRI Announces 2016 Product Updates

ECRI continues to enhance the Rigel software products, adding features, increasing performance, updating support for existing and new interfaces, improving the user interface, and fixing any problems discovered. All Rigel products share a common code base, so applicable improvements are common to all products.

Rigel updates for all product versions are released continuously throughout the year, whenever new features or significant fixes are available. Users have the option to check for updates automatically or manually and be notified automatically when one is available. Customers on software maintenance can download free updates at any time.

Most minor changes will increment only the software build number that appears in the program About box, but ECRI will still increment the main software version number to denote more significant changes.

New product version numbers for 2016:

Rigel Workstation 2.3
Rigel Analyst 2016
Rigel CIW 1.2
Gemini 2.3

What's new in 2016:

- Support for multiple site types beyond Crimes and Suspects
- Thiessen Polygon analysis (advanced feature from Rigel Profiler)
- Fractional crime site contribution to geoprofile (advanced feature from Rigel Profiler)
- Auto-generation of linkage questions from data columns
- Kernel-density hot-spot map generation and display
- Predictive future risk map generation and display
- Updated mapping software support:
 - ESRI ArcGIS 10.4 (version update)
 - latest Google Maps 3.25 (anticipating the announced move by Google to require individual organization keys)
 - Improvements to support for MapPoint and MapInfo

(Note: Only Microsoft MapPoint, Google Maps, and ESRI ArcGIS are included in the default installation package. Please contact ECRI Support if you require others.)

- Single-computer multi-user support with individual username/password
- Installer now accepts command-line arguments to allow auto-installation scripts
- Many small user interface improvements and bug fixes.
